SAFETY PRECAUTIONS

FIRE HAZARD! Your model is able to use LiPo batteries. Charging and discharging batteries has the potential for fire, explosion, serious injury, and property damage if not performed per the instructions. Before use, read and follow all manufacturer’s instructions, warnings, and precautions. In addition, Lithium Polymer (LiPo) batteries pose a SEVERE risk of fire if not properly handled per the instructions and require special care and handling procedures for long life and safe operation. LiPo batteries are intended only for advanced users that are educated on the risks associated with LiPo battery use. Traxxas does not recommend that anyone under the age of 14 use or handle LiPo battery packs without the supervision of a knowledgeable and responsible adult. Dispose of used batteries according to the instructions.

Important Warnings for users of Lithium Polymer (LiPo) batteries:

- LiPo batteries have a minimum safe discharge voltage threshold that should not be exceeded. The electronic speed control is equipped with built-in Low-Voltage Detection that alerts the driver when LiPo batteries have reached their minimum voltage (discharge) threshold. It is the driver’s responsibility to stop immediately to prevent the battery pack from being discharged below its safe minimum threshold.

- Low-Voltage Detection is just one part of a comprehensive plan for safe LiPo battery use. It is critical to follow all instructions for safe and proper charging, use, and storage of LiPo batteries. Make sure you understand how to use your LiPo batteries. If you have questions about LiPo battery usage, please consult with your local hobby dealer or contact the battery manufacturer. As a reminder, all batteries should be recycled at the end of their useful life.

- ONLY use a Lithium Polymer (LiPo) balance charger with a balance adapter port to charge LiPo batteries. Never use NiMH or NiCd-type chargers or charge modes to charge LiPo batteries. DO NOT charge with a NiMH-only charger. The use of a NiMH or NiCd charger or charge mode will damage the batteries and may cause fire and personal injury.

- NEVER charge LiPo battery packs in series or parallel. Charging packs in series or parallel may result in improper charger cell recognition and an improper charging rate that may lead to overcharging, cell imbalance, cell damage, and fire.

- ALWAYS inspect your LiPo batteries carefully before charging. Look for any loose leads or connectors, damaged wire insulation, damaged cell packaging, impact damage, fluid leaks, swelling (a sign of internal damage), cell deformity, missing labels, or any other damage or irregularity. If any of these conditions are observed, do not charge or use the battery pack. Follow the disposal instructions included with your battery to properly and safely dispose of the battery.

- DO NOT store or charge LiPo batteries with or around other batteries or battery packs of any type, including other LiPos.

- Store and transport your battery pack(s) in a cool dry place. DO NOT store in direct sunlight. DO NOT allow the storage temperature to exceed 140°F or 60°C, such as in the trunk of a car, or the cells may be damaged and create a fire risk.

- DO NOT disassemble LiPo batteries or cells.

- DO NOT attempt to build your own LiPo battery pack from loose cells.

Charging and handling precautions for all battery types:

- BEFORE you charge, ALWAYS confirm that the charger settings exactly match the type (chemistry), specification, and configuration of the battery to be charged.

- DO NOT attempt to charge non-rechargeable batteries (explosion hazard), batteries that have an internal charge circuit or a protection circuit, batteries that have been altered from original manufacturer configuration, or batteries that have missing or unreadable labels, preventing you from properly identifying the battery type and specifications.

- DO NOT exceed the maximum manufacturer recommended charge rate.

- DO NOT let any exposed battery contacts or wires touch each other. This will cause the battery to short circuit and create the risk of fire.

- While charging or discharging, ALWAYS place the battery (all types of batteries) in a fire retardant/fire proof container and on a non-flammable surface such as concrete.

- DO NOT charge batteries inside of an automobile. DO NOT charge batteries while driving in an automobile.

- NEVER charge batteries on wood, cloth, carpet, or on any other flammable material.

- ALWAYS charge batteries in a well-ventilated area.

- REMOVE flammable items and combustible materials from the charging area.

- DO NOT leave the charger and battery unattended while charging, discharging, or anytime the charger is ON with a battery connected. If there are any signs of a malfunction or in the event of an emergency, unplug the charger from the power source and disconnect the battery from the charger.

- DO NOT operate the charger in a cluttered space, or place objects on top of the charger or battery.

- If any battery or battery cell is damaged in any way, DO NOT charge, discharge, or use the battery.

- Keep a Class D fire extinguisher nearby in case of fire.

- DO NOT disassemble, crush, short circuit, or expose the batteries to flame or other source of ignition. Toxic materials could be released. If eye or skin contact occurs, flush with water.

- If a battery gets hot to the touch during the charging process (temperature greater than 110°F / 43°C), immediately disconnect the battery from the charger and discontinue charging.

- Allow the battery pack to cool off between runs (before charging).

- ALWAYS unplug the charger and disconnect the battery when not in use.

- ALWAYS unplug the battery from the electronic speed control when the model is not in use and when it is being stored or transported.

- DO NOT disassemble the charger.

- REMOVE the battery from your model or device before charging.

- DO NOT expose the charger to water or moisture.

- ALWAYS store battery packs safely out of the reach of children or pets. Children should always have adult supervision when charging and handling batteries.

- Nickel-Metal Hydride (NiMH) batteries must be recycled or disposed of properly.

- Always proceed with caution and use good common sense at all times.
All of us at Traxxas want you to safely enjoy your new model. Operate your model sensibly and with care, and it will be exciting, safe, and fun for you and those around you. Failure to operate your model in a safe and responsible manner may result in property damage and serious injury. The precautions outlined in this manual should be strictly followed to help ensure safe operation. You alone must see that the instructions are followed and the precautions are adhered to.

**Important Points to Remember**

- Your model is not intended for use on public roads or congested areas where its operation can conflict with or disrupt pedestrian or vehicular traffic.
- Never, under any circumstances, operate the model in crowds of people. Your model is very fast and could cause injury if allowed to collide with anyone.
- Because your model is controlled by radio, it is subject to radio interference from many sources that are beyond your control. Since radio interference can cause momentary losses of radio control, always allow a safety margin in all directions around the model in order to prevent collisions.
- The motor, battery, and speed control can become hot during use. Be careful to avoid getting burned.
- Don't operate your model at night, or anytime your line of sight to the model may be obstructed or impaired in any way.

**Speed Control**

Your model’s electronic speed control (ESC) is an extremely powerful electronic device capable of delivering high current. Please closely follow these precautions to prevent damage to the speed control or other components.

- **Disconnect the Battery**: Always disconnect the battery or batteries from the speed control when not in use.
- **Insulate the Wires**: Always insulate exposed wiring with heat shrink tubing to prevent short circuits.
- **Transmitter on First**: Switch on your transmitter first before switching on the speed control to prevent runaways and erratic performance.
- **Don’t Get Burned**: The ESC and motor can become extremely hot during use, so be careful not to touch them until they cool. Supply adequate airflow for cooling.
- **Use the Factory-Installed Connectors**: Do not change the battery and motor connectors. Improper wiring can cause fire or damage to the ESC. Please note that modified speed controls can be subject to a rewiring fee when returned for service.

- **No Reverse Voltage**: The ESC is not protected against reverse polarity voltage.
- **No Schottky Diodes**: External Schottky diodes are not compatible with reversing speed controls. Using a Schottky diode with your Traxxas speed control will damage the ESC and void the 30-day warranty.
- **Always** adhere to the minimum and maximum limitations of the speed control as stated in the specifications table in the Owner’s Manual. If your ESC operates on two batteries, do not mix battery types and capacities. Use the same voltage and capacity for both batteries. Using mismatched battery packs could damage the batteries and electronic speed control.

**Recycling Traxxas Power Cell NiMH Batteries**

Traxxas strongly encourages you to recycle Power Cell NiMH batteries when they reach the end of their useful life. Do not throw batteries in the trash. All Power Cell NiMH battery packs display the RBRC (Rechargeable Battery Recycling Corporation) icon, indicating they are recyclable. To find a recycling center near you, ask your local hobby dealer or visit www.call2recycle.org.
Thank you for purchasing the Traxxas Slash unassembled kit. The Traxxas Slash short-course race truck puts you in the driver’s seat for intense fender-to-fender, high-flying off-road action. Bringing the thrill of 900+ horsepower full-scale racing and head-to-head competition to your own backyard. The rear-wheel drive Slash is purpose built to fly over jumps and rip full-throttle through the turns. The Slash hangs it out for an all new way to challenge your driving skills. The 4-wheel independent suspension and racing tires carefully replicate real world driving and handling experience as closely as possible.

This manual details the assembly of the Slash. This manual will also acquaint you with the model’s many different components and its mechanical operation. Read through the manual and examine the model carefully before opening any of the parts bags included in the kit. If for some reason you think the model is not what you wanted, then do not continue any further. Your hobby dealer absolutely cannot accept a model for return or exchange which has been run or contains open bags.

If you have any questions about your Slash, call Traxxas’ technical support department at 1-888-TRAXXAS (1-888-872-9927) (U.S. residents only). Outside the U.S., call +1-972-549-3000). Technical support is available Monday through Friday, from 8:30am to 9:00pm central time. Technical assistance is also available at Traxxas.com/support or via e-mail at support@Traxxas.com.

Join thousands of registered members in our online community at Traxxas.com. Traxxas offers a full-service, on-site repair facility to handle any of your Traxxas service needs. Maintenance and replacement parts may be purchased directly from Traxxas by phone or online at Traxxas.com. You can save time, along with shipping and handling costs, by purchasing replacement parts from your local dealer. Do not hesitate to contact us with any of your product support needs. We want you to be thoroughly satisfied with your new model!

ASSEMBLY HINTS
To assemble this kit, you’ll need a large flat working area where you will have plenty of room to build. Be sure it’s a place where you can leave your work spread out and not in the way when you want to take a break from the assembly. Allow yourself plenty of time to build this kit; assembly time is going to vary with each individual. Experienced builders may only need 4-5 hours to assemble this kit, while others may spend an entire weekend on it. You should feel comfortable with taking as much time as needed to properly build and set up your model.

If you’ve been exploring the contents of your kit box, you’ve noticed many bags of small parts. Open only one bag at a time. To keep the parts organized, use small paper plates or several large plastic plates with partitions to contain the parts. Label the paper plates, and then pour the contents of the bags onto them. This puts the parts out in the open where you can find them easily. The plates also prevent small parts from rolling off the table.

Please read the text next to each diagram. The text contains important information, such as assembly steps, screw sizes, and part numbers. Also, pay attention to any notes that may follow some steps. Before you attempt to run your newly-built model, please read all of the instructions and precautions included in the Owner’s Manual. You can download the Owner’s Manual for the Slash, as well as the manuals for all Traxxas vehicles, at Traxxas.com.

Remember, as you assemble your Traxxas model, you are not alone. If you have any questions or run into difficulties, call Traxxas’ technical support department at 1-888-TRAXXAS (1-888-872-9927) (U.S. residents only). Outside the U.S., call +1-972-549-3000). Technical support is available Monday through Friday, from 8:30am to 9:00pm central time.

ITEMS YOU WILL NEED
Some of the tools that you may need in the maintenance and repair of your model have been provided. These include:

- Antenna nut wrench
- 1.5mm "L" wrench
- Turnbuckle wrench
- 2.0mm "T" wrench
- 4-way wrench
- 2.5mm "T" wrench

Required but not included:

- Phillips screwdriver
- 4 AA alkaline batteries
- NiMH battery pack or LiPo battery pack
- NiMH/LiPo battery charger
- Safety glasses
- Needle nose pliers
- Polycarbonate RC Body Paint

The following items are not required for the operation of your model, but are a good idea to include in any RC toolbox:

- Metric hex driver set (part #3415) (highly recommended for kit assembly)
- Hobby knife
- Side cutters
- Traxxas Ultra Premium Tire Glue (CA glue) (part #6468)

These items can be purchased from your hobby dealer.
RADIO SYSTEM INSTRUCTIONS

The Traxxas TQ 2.4GHz radio system is provided with your unassembled kit. Complete instructions for operating the radio system are included in the Slash Owner’s Manual. You can download the Owner’s Manual for the Slash, as well as the manuals for all Traxxas vehicles, at Traxxas.com.

WARRANTY STATEMENT

Every effort has been made in component design and material selection to make your model as durable as possible and still maintain a weight consistent with good handling. Because this model is intended for operation under severe conditions, no warranties are expressed nor implied relating to the longevity of the parts. If you find that a part has a defect in materials or workmanship, please return it to us BEFORE IT IS USED, and we will gladly replace it. Damage caused by excessive force, abuse, neglect or failure to adhere to the precautions outlined in the literature contained with your model will void the warranty.

HARDWARE DESCRIPTIONS

The following chart is provided to help you identify the many different sizes and types of hardware that are used in the assembly of this model. Note the difference between the length measurements of the roundhead and countersunk screws. A ruler is provided at the bottom of each page to measure the length of the screws in millimeters.

ICON DESCRIPTIONS

There are icons in this assembly instruction which indicate certain actions needed during assembly.

**White: Silicone**

- Grease Tube: Apply included grease to part indicated.

**Black: Black Lithium**

- Turn Icon: Indicates assembly needs to be flipped or turned around.

**Oil Bottle**

- Use included silicone shock oil.

**Repeat Icon**

- Repeat step the number of times indicated.

**Optional Part Icon**

- Optional part available. Refer to included parts list.

**Aluminum Part Icon**

- Aluminum accessory part available. Refer to included parts list.
A. DIFFERENTIAL ASSEMBLY

DIFFERENTIAL BAG

Differential Housing with Steel Ring Gear
Differential Cover Plate
Sun Gear (2)
2.5x8.8mm Pin
Planetary Gear (4)
2.5x15.8mm Pin (4)
2.6x8mm CCS (4)
Black Lithium Grease

A1. Install a sun gear into differential housing

2.5x8.8mm Pin
Sun Gear

A2. Assemble planetary gears and install into differential housing

2.5x15.8mm Pin
Planetary Gear
Completed Planetary Gear Assembly

Differential Housing with Steel Ring Gear

A3. Install remaining sun gear into differential housing

2.5x8.8mm Pin
Liberally coat all gears

A4. Install differential cover plate

2.6x8mm CCS
Differential Cover Plate
Completed Differential Assembly

Align notches
B. SHOCK ASSEMBLY

**SHOCK BAG**

- Shock Assemblies
- Silicone Shock Oil
- Front Shock Springs (Short)
- Rear Shock Springs (Long)
- Upper Spring Retainers (4)
- Lower Spring Retainers (4)
- Preload Spacers (2)

**ACCESSORY**

**A. Aluminum Accessory**
- 3767A Blue Shock Caps
- 3767G Green Shock Caps
- 3767X Red Shock Caps

**B. Titanium Nitride**
- Shock Shafts
  - 1664T Long
  - 2656T XX-long
- 3767A Blue Shock Caps
- 3767G Green Shock Caps
- 3767X Red Shock Caps

---

1. **Unscrew cap**
2. **Fill with shock oil**
   - 3mm (1/8”)
3. **Slowly move piston to remove excess air, then let sit a few minutes until all the bubbles are out.**
4. **Add oil to reach the proper level. Ensure the piston is covered in oil to prevent pulling air into the shock.**
5. **Note: Shaft should be fully compressed when cap is installed.**

---

**Shock Exploded View**

- Shock Cap
- Preload Spacer*
- Rubber Diaphragm
- Upper Spring Retainer
- Bump Stop*
- Lower Spring Retainer
- Shock Spring

---

**Exercise shock to make sure it compresses fully. If it does not, it is overfilled.**

---

**Front Shocks Assembled**

**Rear Shocks Assembled**

---

*8mm preload spacer and bump stop on rear shocks only*
C. REAR MODULE ASSEMBLY

**TRANSMISSION BAG**
- Gearbox Halves (L&R)
- 5x11x4mm BB (4)

**Differential Bag**
- Black Lithium Grease

---

**C1. Insert 5x11x4mm bearings into gearbox halves**

- Note: Bearing Seating
  - Press down hard to ensure bearings are fully seated.

---

**C2. Install 5x8x0.5 washers on gear shaft assembly and install into left gearbox half**

- 22T Gear Shaft Assembly
- 5x8x0.5 PTFE Washer (2)
C. REAR MODULE ASSEMBLY

**C3. Assemble idler gear shaft and install idler gear shaft assembly into left gear box half**

1. 30T Idler Gear
   - 5x11x4mm BB
   - 5x8x0.5 PTFE Washer

2. Idler Gear Shaft
   - 30T Idler Gear Shaft Assembly

3. 5x8x0.5 PTFE Washer

**C4. Install differential assembly into left gearbox half**

**C5. Assemble transmission case**

**TRANSMISSION BAG**
- 5x11x4mm BB (2)
- 30T Idler Gear
- Idler Gear Shaft
- 5x8x0.5 PTFE Washer (2)

**DIFFERENTIAL BAG**
- Black Lithium Grease

**TRANSMISSION BAG**
- 3x23mm BCS (5)
- 3x20mm BCS
- Black Tape

**DIFFERENTIAL BAG**
- Black Lithium Grease

**Note:** Make sure the gears are meshed

Install included black tape on the bottom of the gearbox
C. REAR MODULE ASSEMBLY

TRANSMISSION BAG
- 3x8mm FCS (2)
- Fixed Gear Adapter

ELECTRONICS BAG
- Titan 12T Motor
- 16T Pinion Gear
- 3x4mm GS

C6. Install pinion gear onto motor and install motor into transmission case

C7. Assemble slipper clutch and spur gear onto the input shaft

1. Slipper Pressure Plate
2. Slipper Clutch Spring
3. Slipper Steel Disc
4. Slipper Hub
5. 2x10mm Pin
6. 5x11x4mm BB
7. Slipper Friction Pad

Install pin into input shaft:
- 2x10mm Pin
- Slipper Friction Pad
- Slipper Steel Disc
- Slipper Pressure Plate

Slipper Clutch Spring
M4x0.7 NL

Tip: Insert the included “T” and “L” wrenches into the diff shaft to hold it in place while tightening the slipper clutch adjusting nut.

2. Spur gear installation
- 90T Spur Gear
- 3x6mm CS

3. Slipper Hub
5x11x4mm BB

Tighten the slipper clutch adjusting nut clockwise until the slipper clutch adjusting spring is fully compressed (do not overtighten), and then turn the slipper clutch nut counterclockwise one full turn.

ACCESSORY
- Option Part
- 3350R Velineon VXL-3s Brushless Power System

Tip: Insert the included “T” and “L” wrenches into the diff shaft to hold it in place while tightening the slipper clutch adjusting nut.

TRANSMISSION BAG
- 3x8mm FCS (2)
- Fixed Gear Adapter
C. REAR MODULE ASSEMBLY

**TRANSMISSION BAG**

- Gear Cover
- Gear Cover Plug
- 3x6mm BCS
- 3x8mm BCS

**C8. Install gear cover onto transmission case**

1. Fold in gear cover tab before installation

**TRANSMISSION BAG**

- Inner Driveshafts
- 3x11mm Screw Pin (2)

**C9. Install inner driveshafts onto transmission case**

**ACCESSORY**

- Option Part
- 6852R CV Driveshafts

**REAR SUSPENSION BAG**

- Rear Shock Tower
- Rear Camber Links (2)
- 3x15mm FCS (2)

**C10. Attach the camber links to the rear shock tower**

- Note orientation. The smaller hollow ball installs on the shock tower. The wider ends of both hollow balls should face the shock tower.

**ACCESSORY**

- Aluminum Accessory
- 3737 Red Camber Links
- 3737A Blue Camber Links
C. REAR MODULE ASSEMBLY

REAR SUSPENSION BAG  **C11. Attach the rear shock tower to transmission case**

- 3x12mm BCS (2)

REAR SUSPENSION BAG  **C12. Install rear body post onto rear shock tower**

- Rear Body Mount
- 2.5x12mm CS (4)
C. REAR MODULE ASSEMBLY

REAR SUSPENSION BAG

**C13. Install rear suspension arms onto transmissions case**

Rear Suspension Arm (L&R)
- 3x46mm Screw Pin (2)

**ACCESSORY**

Option Part
Heavy Duty Suspension Arms (various colors; see included parts list)

REAR SUSPENSION BAG

**C14. Assemble outer driveshafts and hub**

- Rear Axle Carrier (2)
- Outer Driveshaft with Stub Axle (2)
  - 5x11x4mm BB (4)
- 2x10mm Stub Axle Pin (2)
- Hex Wheel Hub (2)
  - 5x8x0.8 PTFE Washer (2)
  - 5x8x0.3 PTFE Washer (2)

**ACCESSORY**

Aluminum Accessory
- Rear Axle Carriers
  - 3652A Blue
  - 3652X Red
  - 3652G Green
  - 3652P Pink

*SNAP*

- Hex Wheel Hub
- 2x10mm Stub Axle Pin
C15. Install outer driveshaft assemblies

- 3x28mm Screw Pin (2)
- 3x15mm BCS (2)
- Outer Driveshaft Assembly

Correct driveshaft U-joint alignment.

C16. Install rear skid plate on bottom of transmission case

- Rear Skid Plate
- 4x12mm CCS (4)
- 3x12mm CCS (2)
C. REAR MODULE ASSEMBLY

**C17. Install wheelie bar mount**

- Wheelie Bar Mount
- 3x40mm BCS
- 3x30mm BCS
- 3x12mm BCS

**C18. Install rear bumper**

- Rear Bumper
- Rear Bumper Brace
- 3x15mm BCS (2)
- 3x12mm CSS (4)

**Parts Used:**
- 3x15mm BCS (2)
- 3x12mm CSS (4)
C. REAR MODULE ASSEMBLY

REAR SUSPENSION BAG

3x14mm BCS (2)

3x15mm BCS (2)

C19. Install rear shocks

3x14mm BCS

3x14mm BCS

3x15mm BCS

3x15mm BCS

Install into Position 2 for best off-road performance.

Completed rear module assembly

Check your assembly carefully.
D. FRONT MODULE ASSEMBLY

FRONT SUSPENSION BAG

D1. Assemble front body mount

- Front Body Mount Base
- Body Post (2)
- 3x8mm BCS (2)
- Front Bulkhead
- Front Shock Tower
- 3x15mm BCS (2)
- 3x10mm FCS (2)

D2. Assemble body mount, shock tower and bulkhead

- Front Body Mount
- 3x10mm FCS
- Front Shock Tower
- 3x15mm BCS

FRONT SUSPENSION BAG

D3. Install front camber links

- Front Camber Link (2)
- 3x15mm FCS (2)

Note orientation. The wider end of the larger hollow ball should face away from the shock tower.

The smaller hollow ball installs on the shock tower. The wider end should face the shock tower.
D. FRONT MODULE ASSEMBLY

FRONT SUSPENSION BAG

Front Suspension Arm (2)
44mm Suspension Pin (2)
Tie Bar
3mm E-Clip (4)

D4. Attach the front suspension arms to the front bulkhead assembly

Use needle nose pliers to press E-clip onto suspension pin.
D. FRONT MODULE ASSEMBLY

FRONT SUSPENSION BAG

D5. Assemble the front hubs

1. Steering Block
2. 5x11x4mm BB
3. Front Axle
4. Front Axle Pin
5. Hex Wheel Hub
6. Front Axle (2)
7. 5x11x4mm BB
8. 5x8x0.5 PTFE Washer
9. 2x10mm Axle Pin (2)
10. 5x11x4mm BB

D6. Attach caster blocks to the front hubs

1. Right Caster Block
2. 3x26.5mm Screw Pin
3. Left Caster Block
4. 3x26.5mm Screw Pin

D7. Install front hub assembly to the front suspension arms

1. M3x0.5 NL (2)
2. 3x18mm BCS (2)
3. 3x26.5mm Screw Pin (2)
4. 3x18mm BCS
5. M3x0.5 NL
6. 3x23.5mm Screw Pin
7. 3x23.5mm Screw Pin
8. 3x23.5mm Screw Pin

ACCESSORY

Aluminum Accessory
- Steering Blocks (various colors: see included parts list)
- Caster Blocks (various colors: see included parts list)
D. FRONT MODULE ASSEMBLY

**D8. Assemble the steering bellcranks onto the front skidplate and install onto front bulkhead assembly**

1. 3x30mm CS
2. 3x6x0.5mm MW
3. 5x8x2.5mm PB
4. 5x8x2.5mm PB
5. 5x8x0.5 PTFE Washer
6. 5x8x2.5mm PB
7. 5x8x0.5 PTFE Washer

**D9. Install toe links onto front bulkhead assembly**

1. M3x0.5 NL (4)
2. M3x0.5 NL
3. M3x0.5 NL
4. M3x0.5 NL
5. 3x18mm BCS (4)
6. 3x18mm BCS
7. 3x18mm BCS
8. 3x18mm BCS
9. 3x18mm BCS
10. 3x18mm BCS
11. 3x18mm BCS

**ACCESSORY**

- Aluminum Accessory Bellcrank Assemblies
  (various colors; see included parts list)
D. FRONT MODULE ASSEMBLY

**D10. Install steering link and servo saver to bellcrank**
- Servo Saver
- Steering Link
- M3x0.5 NL
- 3x14mm BCS (2)

**D11. Install front bumper onto front bulkhead**
- Front Bumper
- 4x12mm CCS (4)
- 4x12mm CCS
- 4x12mm CCS
D. FRONT MODULE ASSEMBLY

FRONT SUSPENSION BAG

D12. Install front shocks

- 3x15mm BCS (4)

Note: These screws may be included in the CHASSIS BAG

3x15mm BCS

Install into Position 1 for best off-road performance.

Completed front module assembly

Check your assembly carefully.
**E. CHASSIS ASSEMBLY**

**CHASSIS BAG**
- Slash Chassis
- 3x8mm FCS (4)
- 3x15mm CS (2)

**ELECTRONICS BAG**
- Steering Servo
- XL-5 Electronic Speed Control (ESC)

**ACCESSORY**
- Option Part
  - 2075 Digital High-Torque Servo
  - 2275R Digital High-Speed Servo
  - 2250 Coreless Servo
  - 2255 Brushless Servo
- Option Part
  - 3350R Velineon VXL-3s Brushless Power System

---

**E1. Install steering servo into chassis**

- 3x8mm FCS
- Slash Chassis

**E2. Install electronic speed control onto chassis**

- 3x15mm CS
- XL-5 Electronic Speed Control

---

**E3. Install receiver into lower receiver box**

- Lower Receiver Box
- Lower Receiver Box Foam

**ELECTRONICS BAG**
- TQ Receiver
- Receiver Foam Tape

**ACCESSORY**
- Option Part
  - 6533 TQi 2.4GHz 5Ch Micro Receiver

---

**Route antenna wire through antenna post**

---

**Tip:** Route the antenna wire out of the lower receiver box before attaching the receiver.
E. CHASSIS ASSEMBLY

- **CHASSIS BAG**
  - 3x6mm BCS (2)

- **TOOLS BAG**
  - Antenna Nut Wrench

---

**E4. Install the lower receiver box**

1. Use the supplied tool to tighten the crimp nut on the post.
2. Slide the crimp nut over the antenna tube onto the post.
3. Use the supplied tool to tighten the crimp nut on the post.
4. Install antenna tip.

**E5. Install wires into the receiver box and plug the wires into the receiver**

Route the servo wire through the chassis

Route wires through the lower receiver box

Bundle excess wires into the receiver box

**E6. Slide the antenna wire into the antenna tube and install into the post on the lower receiver box**

1. Antenna Tip
2. Antenna Tube
3. Antenna Crimp Nut

**Take care not to crimp the antenna wire when inserting the antenna tube**

**Do not overtighten or crush the antenna wire. Do not kink or cut the black wire, do not bend or cut the metal tip, and do not bend or cut the white wire at the end of the metal tip. Do not shorten the antenna tube.**
E. CHASSIS ASSEMBLY

**CHASSIS BAG**
- Receiver Box Cover
- O-Ring Seal
- 3x8mm BCS (2)
- Receiver Wire Clamp
- Upper Receiver Box Foam
- 2.5x8mm CS (2)

**ELECTRONICS BAG**
- Silicone Grease

**TOOLS BAG**
- 4-Way Wrench

**E7. Waterproof and seal the receiver box**

1. Apply small bead of grease
2. Upper Receiver Box Foam
3. Apply small bead of grease
4. Take care not to crimp the wires during installation

**E8. Install battery hold down**

1. Battery Hold Down Mount
2. Battery Hold Down
3. 3x15mm CCS (2)
4. Battery Post
5. Angled Body Clip

Use included 4-way wrench for battery post installation
**E. CHASSIS ASSEMBLY**

**CHASSIS BAG**

- Nerf Bar (2)
- 3x8mm BCS (4)

---

**E9. Install nerf bars onto the chassis**

**Completed chassis assembly**

- Check your assembly carefully.
F. SUSPENSION INSTALLATION

**CHASSIS BAG**

**F1. Attach the rear module to the chassis**

- 3x12mm BCS (4)

*Route ESC wires through the shock tower and connect to the motor. Red to red / black to black.*

**CHASSIS BAG**

**F2. Attach the front module to the chassis**

1. Ensure the steering bellcrank screw heads are seated into the bosses on the chassis bottom.

2. Front Bumper Mount
   - 3x12mm BCS (2)
   - 3x15mm BCS (2)
   - 4x12mm BCS (3)
   - 4x14mm BCS (2)
F. SUSPENSION INSTALLATION

CHASSIS BAG

3x10mm BCS

F3. Center the steering servo

1. Turn transmitter on (see Quick Start)

2. Plug charged battery into ESC (see Quick Start)

3. Turn on the model (see Quick Start)

4. Set Steering Trim to Zero (see Quick Start)

5. Unplug battery and turn transmitter off

F4. Install the servo horn onto the servo

Completed installation

Check your assembly carefully.

Completed installation

3x10mm BCS
G. FINAL ASSEMBLY

WHEELS AND TIRE BAG

G1. Install tires on front and rear axles

M4x0.7 NL (4)

Assembled Front Tires and Wheels (2)

Assembled Rear Tires and Wheels (2)

Note the location marked on the inside of the wheel when installing.

Kit assembly complete
Buying Paint
The body supplied with your model is molded from lightweight and durable clear polycarbonate. It should be painted on the underside so that the color will not be scratched off while running. The best way to paint the body is by using thinned paints sprayed through an airbrush or spray gun. If you do not have these tools, the next best way is using spray can paints. Whatever paint you use, be sure that it is made for painting Lexan® or polycarbonate. Other types of paints and solvents can attack the body material and cause it to appear foggy.

Preparing the Body
The body must be washed thoroughly with dish soap and water to remove any grease or oil (i.e., fingerprints), which may keep the paint from adhering to it. Dry the body completely with a soft, lint-free cloth. Use the supplied masks to mask the windows and any stripes or custom effects on the truck body. Special tape made for striping is also available from automotive paint supply stores and will provide sharper edges. For easy, custom-colored striping, automotive pin-striping tape can be applied to the inside of the body and painted over. Be sure that all of your tape and masks are fully pressed down (burnished) so that the paint will not run or bleed underneath. Usually, the darker colors are painted first, followed by the lighter colors. If your paint scheme would be easier to mask by covering the dark areas and spraying them last, be sure the lighter colors are opaque enough to prevent the darker color from showing through. Lighter colors can be backed with silver to help make them opaque.

Spraying the Body
Read the directions on your bottle or can of paint and shake, mix, or thin the paint, as required. It is very important to avoid breathing the paint vapors, as they are extremely harmful. Spray the paint outdoors in well-ventilated areas only. Apply the paint to the body sparingly and in light coats. Be patient! Let the paint dry fully in between coats. This will prevent accidentally smearing wet paint. Take extra care when masks are being removed. After the body is completely painted, remove the peel coat from the outside of the body.

Decals
You are now ready to apply the decals. The decals have been die-cut for your convenience. Test the position of the decals before applying them to the body. Once the decals have been applied, they cannot be removed without damaging them. You can spray the body with window cleaner before applying the decals. This will allow you to re-position them. Once positioned, squeegee the cleaner from under the decal. The decal will adhere when it dries. If you have air bubbles in the decals, puncture the center of each bubble with a sharp pin and push the air out. If you have creases along the outer edges of a decal (especially when applied to curved surfaces), use a hobby knife to cut along the top of the crease and overlap the edges.

Note: Please read this entire section and plan your paint job before beginning.
Appendix 1: Body installation

Body Clip (4)
The following guide is an overview of the procedures for getting your model running. The complete manual for your model can be viewed and downloaded by following the link on the cover of this manual or by scanning the QR code. Please read this entire manual for complete instructions on the proper use and maintenance of your model.

**Read the Safety Precautions**
For your own safety, understand where carelessness and misuse could lead to personal injury and product damage.

**Prepare Your Model**
Selecting a charger and batteries for your model
Your model does not include a battery or charger. The speed control in the model is compatible with both LiPo and NiMH batteries. One NiMH or 2s LiPo battery equipped with a Traxxas High Current connector is required. Traxxas Power Cell iD batteries are strongly recommended for maximum performance and safer charging. The following chart lists available Power Cell batteries for your model:

<table>
<thead>
<tr>
<th>LiPo Batteries with iD</th>
<th>NiMH Batteries with iD</th>
</tr>
</thead>
<tbody>
<tr>
<td>2843X  5800mAh  7.4V 2-Cell 25C LiPo Battery</td>
<td>2923X Battery, Power Cell, 3000mAh (NiMH, 7-C flat, 8.4V)</td>
</tr>
<tr>
<td>2869X  7600mAh  7.4V 2-Cell 25C LiPo Battery</td>
<td>2940X Battery, Series 3 Power Cell, 3300mAh (NiMH, 7-C flat, 8.4V)</td>
</tr>
</tbody>
</table>

Make certain you choose the correct type of charger for the batteries you select. Traxxas recommends you choose a genuine Traxxas EZ-Peak iD charger for safer charging and maximum battery life and performance.

**WARNING: FIRE HAZARD!**
Users of Lithium Polymer (LiPo) batteries must read the Warnings and Precautions beginning on page 2. You MUST use a LiPo charger for LiPo batteries or battery damage with the potential for fire will result.

**Install the battery pack in the model**
Place the battery in the tray. Insert the hold-down into the chassis as shown. Secure by placing the clip into the post.

Compatible batteries:
- 6-7 cell NiMH
- 2-cell LiPo

**ATTENTION: USERS OF LiPo BATTERIES**
Activate Low-Voltage Detection when using LiPo batteries. Refer to the EZ-Set Tips card attached to your model, or see the Electronic Speed Control Adjustments section of this guide.

**Turning on Your Model**
Turn on the transmitter
Always turn the transmitter on first, before turning on the model. The transmitter’s LED will glow green.

Plug the battery into the speed control
Align the + and – markings. Make certain the battery plug is completely inserted.

**Turn on the model**
Press and release the EZ-Set button on the speed control. The speed control’s LED will glow.

**Before Operating Your Model**
Check servo operation
Confirm the model’s wheels turn right and left when the transmitter steering wheel is turned right and left. The front wheels should be pointing straight ahead. If they are turned slightly, slowly adjust the steering trim control on the transmitter until they are pointing straight ahead.

Range test the radio system
With a friend’s help, check servo operation at the farthest distance you plan to drive the model and confirm that there is no radio interference.

**Operating Your Model**

![Forward and Brake/Reverse controls](image)

Note: After stopping the model, return the transmitter’s trigger to neutral and push up again to activate reverse throttle.

**Install batteries in the transmitter**
The transmitter requires 4 AA alkaline or rechargeable batteries.
Follow these steps to turn on Low-Voltage Detection:

1. Connect a fully charged battery to the model.
2. Turn on the transmitter (with the throttle at neutral).
3. Press and hold the EZ-Set button (A). The LED will first turn green and then red. Release the EZ-Set button.
4. When the LED blinks RED ONCE, pull the throttle trigger to the full throttle position and hold it there (B).
5. When the LED blinks RED TWICE, push the throttle trigger to the full reverse and hold it there (C).
6. When the LED blinks GREEN ONCE, programming is complete. The LED will then shine green or red (depending on Low-Voltage Detection setting).

The speed control is calibrated at the factory. If the LED on the speed control is flashing green, then follow these steps to recalibrate it:

1. Connect a fully charged battery to the model.
2. Turn on the transmitter (with the throttle at neutral).
3. Press and hold the EZ-Set button (A). The LED will first turn green and then red. Release the EZ-Set button.
4. When the LED blinks RED ONCE, pull the throttle trigger to the full throttle position and hold it there (B).
5. When the LED blinks RED TWICE, push the throttle trigger to the full reverse and hold it there (C).
6. When the LED blinks GREEN ONCE, programming is complete. The LED will then shine green or red (depending on Low-Voltage Detection setting).

Selecting a Throttle Mode: SPORT, RACE, or TRAINING

1. Connect a fully charged battery to the model and turn on your transmitter.
2. With the model off, press and hold the EZ-Set button until the LED turns solid green, then solid red, and then begins blinking red. It will blink once, then twice, then three times, then repeat.

   - One blink = Sport Mode is the default setting. It allows full forward and reverse throttle.
   - Two blinks = Race Mode removes reverse throttle in case your track does not allow it.
   - Three blinks = Training Mode will slow the model down by 50% for young or inexperienced drivers.
3. Release the EZ-Set button after the number of blinks for the mode you wish to select. **Note:** If you missed the mode you wanted, keep the EZ-Set button pressed down and the blink cycle will repeat.
4. The LED will blink and then turn solid green (Low-Voltage Detection ACTIVE) or red (Low-Voltage Detection DISABLED). The model is now ready to drive.

**ATTENTION: IF USING A Lipo BATTERY**

To prevent over-discharging of LiPo batteries, Low-Voltage Detection must be switched on. To check the status of your model, turn it on. If the speed control’s LED is green, Low-Voltage Detection is already activated. If the LED is red, Low-Voltage Detection is not active. Follow these steps to turn on Low-Voltage Detection:

1. Turn the model on. Make sure the LED on the speed control is on and red.
2. Press and hold the EZ-Set button for ten seconds. The LED will turn off and then light green, and the motor will beep twice. Release the button.
3. Low-Voltage Detection is now ACTIVATED.

LiPo batteries are intended only for the most advanced users that are educated on the risks associated with LiPo battery use.

**WARNING: FIRE HAZARD!**

Do not use LiPo batteries in this vehicle with Low-Voltage Detection disabled.

Electronic Speed Control Adjustments

**WARNING: FIRE HAZARD!**

To prevent over-discharging of LiPo batteries, Low-Voltage Detection must be switched on. To check the status of your model, turn it on. If the speed control’s LED is green, Low-Voltage Detection is already activated. If the LED is red, Low-Voltage Detection is not active. Follow these steps to turn on Low-Voltage Detection:

1. Turn the model on. Make sure the LED on the speed control is on and red.
2. Press and hold the EZ-Set button for ten seconds. The LED will turn off and then light green, and the motor will beep twice. Release the button.
3. Low-Voltage Detection is now ACTIVATED.

**Steering Trim**

Slowly turn the steering trim knob to precisely set the steering neutral point. To adjust, drive the vehicle forward slowly while “steering” with the trim knob until the vehicle travels in a straight line with no steering input.

**Transmitter Adjustments**

**Transmitter Adjustments**

- **Pointing the transmitter away from the model** will reduce radio range.
- The TQ 2.4GHz transmitter has a directional antenna. For maximum range, hold the transmitter upright and pointed in the direction of the model. Pointing the transmitter away from the model will reduce radio range.
- Avoid running your model in tall grass or soft sand. These will strain the power system and could damage the motor. If the model becomes stuck, do not apply throttle. Free the model before operating it.

Calibrating the Speed Control

The speed control is calibrated at the factory. If the LED on the speed control is flashing green, then follow these steps to recalibrate it:

1. Connect a fully charged battery to the model.
2. Turn on the transmitter (with the throttle at neutral).
3. Press and hold the EZ-Set button (A). The LED will first turn green and then red. Release the EZ-Set button.
4. When the LED blinks RED ONCE, pull the throttle trigger to the full throttle position and hold it there (B).
5. When the LED blinks RED TWICE, push the throttle trigger to the full reverse and hold it there (C).
6. When the LED blinks GREEN ONCE, programming is complete. The LED will then shine green or red (depending on Low-Voltage Detection setting).

Running in Wet Conditions

Your Traxxas model is designed with water-resistant features to protect the electronics in the model (receiver, servos, electronic speed control). Though highly water resistant, the model should not be treated as though it is submersible or totally, 100% waterproof. Water resistance applies only to the installed electronic components. Running in wet conditions requires additional care and maintenance to prevent corrosion and maintain proper function. Download the complete manual for full precautions and maintenance requirements. Read and understand all precautions before operating your model in wet conditions. The complete manual for your model can be viewed and downloaded by following the link on the cover of this manual or by scanning the QR code. Please read this entire manual for complete instructions on the proper use and maintenance of your model.

Gearing

Your model may include additional gears. These gears are for maximum-speed running on hard surfaces only. Using the high-speed gearing for general driving and off-road driving may overheat the motor, speed control, or battery. For full instructions on installing and using the high-speed gearing, download the complete manual. The complete manual for your model can be viewed and downloaded by following the link on the cover of this manual or by scanning the QR code. Please read this entire manual for complete instructions on the proper use and maintenance of your model.

After You Run Your Model

**Turn the model off**

Press and release the EZ-Set button on the speed control. The speed control’s LED will go out.

**Unplug the battery and remove it from the model**

Do not store the model with the battery installed.

**Turn the transmitter off**

Always turn the transmitter off last, after the model has been turned off.
