

New TQ 2.4GHz Radio System featured with select Traxxas models

Traxxas 2.4GHz precision, convenience, and control is an essential feature of the award-winning Slash, Slayer Pro 4X4, 1/16 Summit VXL, and 1/16 E-Revo VXL models. To keep cost low and performance high, these models now include the latest 2-channel TQ 2.4GHz radio system. The new transmitter shares the sleek, internal-antenna styling of the TQi and makes no compromises in precise 2.4GHz control. Servo reversing and steering trim are easily set, and the 3-channel receiver features two channel-1 inputs for use with dual steering servos.

The TQ 2.4GHz transmitter is compatible only with the new #6519 receiver and does not accept the #6510 Docking Base accessory. To see all the compatible Traxxas 2.4GHz transmitter and receiver combinations, see the Compatibility Guide on the following page.

All the standard Slash, Slayer Pro 4X4, 1/16 Summit VXL, and 1/16 E-Revo VXL features are unchanged, so every customer experiences the speed, fun, and performance that makes Traxxas *The Fastest Name In Radio Control*.

Available colors and Race Replica styles are unchanged for the models below.

Slayer Pro 4X4

1/16 E-Revo VXL
